MLOps CEITA(7A-3)

# Practical-4

# Deploy the Machine Learning Model using Flask and Docker.

```
Task 1: Install the required libraries
pip install Flask
pip install gunicorn
Task 2: Follow the steps described in theory material to deploy the model using Flask. Run the flask
application to execute the deployed model.
Flask Code:
from flask import Flask, jsonify, request
from your model import predict # Import your model's prediction function
app = Flask( name )
@app.route('/predict', methods=['POST'])
def prediction(): data =
request.get json(force=True)
  result = predict(data) # Use your model to make predictions
return jsonify(result)
if __name__ == '__main__':
  app.run(port=5000)
Task 3: Create the docker file using the steps described in theory material.
Docker File Code:
FROM python:3.8-slim
```

FROM python:3.8-slim
WORKDIR /app
COPY . /app
RUN pip install --trusted-host pypi.python.org -r requirements.txt
EXPOSE 80
ENV NAME World
CMD ["python", "app.py"]

### Task 4: Create the Docker Image

docker build -t dockerfile.

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker build -t dockerfile .

[+] Building 25.5s (9/9) FINISHED

=> [internal] load .dockerignore

=> => transferring context: 2B

=> [internal] load build definition from dockerfile
```

Task 5: Create the Docker File

#### What's Next?

View summary of image vulnerabilities and recommendations → docker scout quickview PS D:\SEM 7\ML-OPS\Practical\practical> docker run -p 4000:80 dockerfile

Task 6: Check Performance

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker images
REPOSITORY
                  TAG
                              IMAGE ID
                                                CREATED
                                                                    SIZE
dockerfile
                  latest
